

## Upstream Professionals Inc.: Drilling and Production Technician Services

Friday December 19, 9:00 am ET

HOUSTON--(BUSINESS WIRE)--Upstream Professionals Inc., (UP), a consulting company focused on Well Lifecycle operations optimization services for the oil and gas industry, is pleased to announce data entry services by skilled technicians for entering valuable well lifecycle data into applications like Peleton's Wellview, Petris' Operations Center, Landmark DIMS and other drilling and production applications. Upstream Professionals has already entered thousands of wells for several clients and leverages OCR technology to digitize paper records to be entered into operational applications. The founders of Upstream Professionals have many years of upstream oil and gas experience focused on transforming data, enhancing workflows, processes and integrating information into useable knowledge environments that foster operational efficiencies from the well head through production.

In today's fast paced upstream operations environment, where time is money, operators are looking for ways to free up their engineers' time to accomplish necessary activities by outsourcing tasks and services that are not mission critical, but valuable to the organization. To realize maximum value from their operational systems, companies need to migrate valuable drilling and production data into their enterprise applications to drive daily reports, regulatory reports, and analytical purposes.

Once the data is entered into an E&P system, the data needs to be reliable and trustworthy. Upstream Professionals uses proven, cost-effective methods that give consistent and accurate results in all types of well-lifecycle data entry projects. UP technicians have experience interpreting oil and gas data types from various formats such as state and regulatory reports, hand written notes by Engineers, tubing & casing tallies, mud logs, permits, and a multitude of other forms and content that can be leveraged for decision-making. Our experience is that information is usually winds up stored in paper well files or spreadsheets that cannot be queried and goes unused because resources like Engineers are too busy in today's environment to input data and others simply don't have the knowledge and expertise to do the job properly.

Upstream Professionals offers knowledgeable technician data entry and integration services, to operators that are looking for data accuracy, quick turnaround time and affordability. Many times, operators assign the capture of daily data, not in digital format, to lower skilled individuals or it goes to the bottom of the list of higher skilled resources including Engineers. With the rapid rate at which operators are acquiring, developing and producing Assets, UP is offering this service to manage your data entry activities. We provide skilled technician resources for the entry of important data under the quality-control auspices of Petroleum Engineers who oversee the work to ensure accuracy and completeness.

### Benefits

- Immediate, accurate data & reports to run your operations
- Improve decision-making with reliable information
- Well lifecycle data entered into your systems by skilled resources
- Leverage our Technicians and not your Engineers for inputting data
- Spend time analyzing information and not looking for data
